Bitch Boost™

Thank you for purchasing one of my favorite new products, these are the same designs as I use in my custom pedals.
These Modules are used by some of the top guitar players in the world, giving them the extra gain and edge to get their signature sounds.

The Bitch Boost was designed with the idea of being as transparent as possible, to not change the original sound as it comes out of the instrument.
I worked for years on such a design, and have developed a circuit that doesn't degrade the original sound; it enhances it with more clarity and definition.

This allows you to truly make your instrument go to 11 and higher, pushing the amp to really make it sing.
Or make your Instrument stand out over the rest.

Operation:

When bypassed (pressed IN) controls don't work (True Bypass).

Activating Module (Pressed OUT) the Bitch Boost can be used as a very clean boost,

Gain:

The gain control goes from unity, which is the same level that is coming out of your instrument, to all the way up which is over a 100 X the signal.

Power:

The modules can be powered by a single 9 v battery.
You can power multiple modules on one battery.
Make Sure you unplug the Instrument after use to preserve battery life.
